

NextRoll's Privacy Sandbox testing reimagines cookieless bidding & optimization models

At a glance

- To help advertisers prepare for a privacy-first future, NextRoll built Protected Audience integrations that reimagined its core bidding and optimization models. NextRoll engineers then ran system tests to determine whether advertisers could serve remarketing and custom audience campaigns with the Privacy Sandbox APIs.
- NextRoll's RollWorks business saw an opportunity to use Protected Audience API to create customer audience segments to meet the needs of B2B advertiser campaigns, becoming the first account-based marketing (ABM) platform to test the Privacy Sandbox publicly.
- After investing heavily in Protected Audience integrations and rebuilding the ML models that support its bidding system, NextRoll was able to successfully serve ads at volume and solve for remarketing and other first-party custom audience use cases.

NextRoll prepares the advertising ecosystem for privacy-forward remarketing

Over the last four years, NextRoll has been active in public discussions shaping the future of the Privacy Sandbox technologies. Its engineering team developed new approaches to early Privacy Sandbox proposals that informed the direction for the Protected Audience API, and NextRoll continues to provide early testing insights to Chrome and the broader ecosystem.

NextRoll's testing systems helped its subsidiaries RollWorks, an ABM platform for B2B advertisers, and AdRoll, a DSP that serves B2C mid-sized businesses, understand the Privacy Sandbox APIs' [impact on their customers' campaigns](#).

“We're excited for the next era of online privacy and are actively working to usher it in, with new technologies and marketing approaches.”

Andrew Pacoe
Vice President
Data Science Engineering at NextRoll

RollWorks was also the only ABM company represented during early Privacy Sandbox discussions within the World Wide Web Consortium (W3C) and became the first ABM platform to test the Privacy Sandbox APIs publicly.

“NextRoll has taken a different approach. We’ve built a brand new, privacy-forward DSP/RTB engine from the ground up. This has allowed us to demonstrate how Privacy Sandbox works not just for existing use cases, such as remarketing, but also to begin exploring new modes of privacy-protecting first-party data activation. We’re excited for the next era of online privacy and are actively working to usher it in, with new technologies and marketing approaches.” - **Andrew Pascoe, Vice President, Data Science Engineering**

Testing the technology

NextRoll invested heavily in building sophisticated Protected Audience integrations. Its solutions refactored core bidding, optimization, segmentation, and ad-serving technology, plus ran system tests to gauge Protected Audience’s ability to serve remarketing and custom audiences. NextRoll enabled the tests for its advertisers and capped the budget at 1% of ad spend, allowing for high-level directional insights without impacting individual advertiser campaign performance.

To integrate Protected Audience and effectively serve advertisers of all sizes, NextRoll completely rebuilt the custom machine learning systems that support its bidder, BidIQ. This new bidding system treats Privacy Sandbox technologies as the primary method for delivering ads with privacy in mind.

The results

With these new systems, NextRoll served ads across more than 20,000 campaigns, solved for remarketing and custom audience use cases, and [identified opportunities](#) to fine-tune the technology and further improve performance. NextRoll’s early results demonstrated that private advertising is possible with the Privacy Sandbox APIs despite lower-than-expected publisher participation rates impacting available ad inventory and, ultimately, campaign performance. Now that NextRoll has concluded its systems tests, it plans to ramp up for a wider performance test and continues to share its findings with Chrome and the advertising ecosystem. As the Privacy Sandbox [evolves](#), NextRoll is committed to expanding adoption with more supply partners and will continue to share results with the ecosystem.

“We believe there is a massive opportunity to build sophisticated privacy-friendly solutions that will advance the industry.”

Roli Saxena
CEO at NextRoll

“As a privacy advocate for many years, NextRoll has been a consistently supportive stakeholder among industry working groups for user privacy online. We believe there is a massive opportunity to build sophisticated privacy-friendly solutions that will advance the industry. While this new technology will continue to evolve over the coming years, this is the future of digital advertising, and we encourage the industry to lean in.” - **Roli Saxena, CEO**
